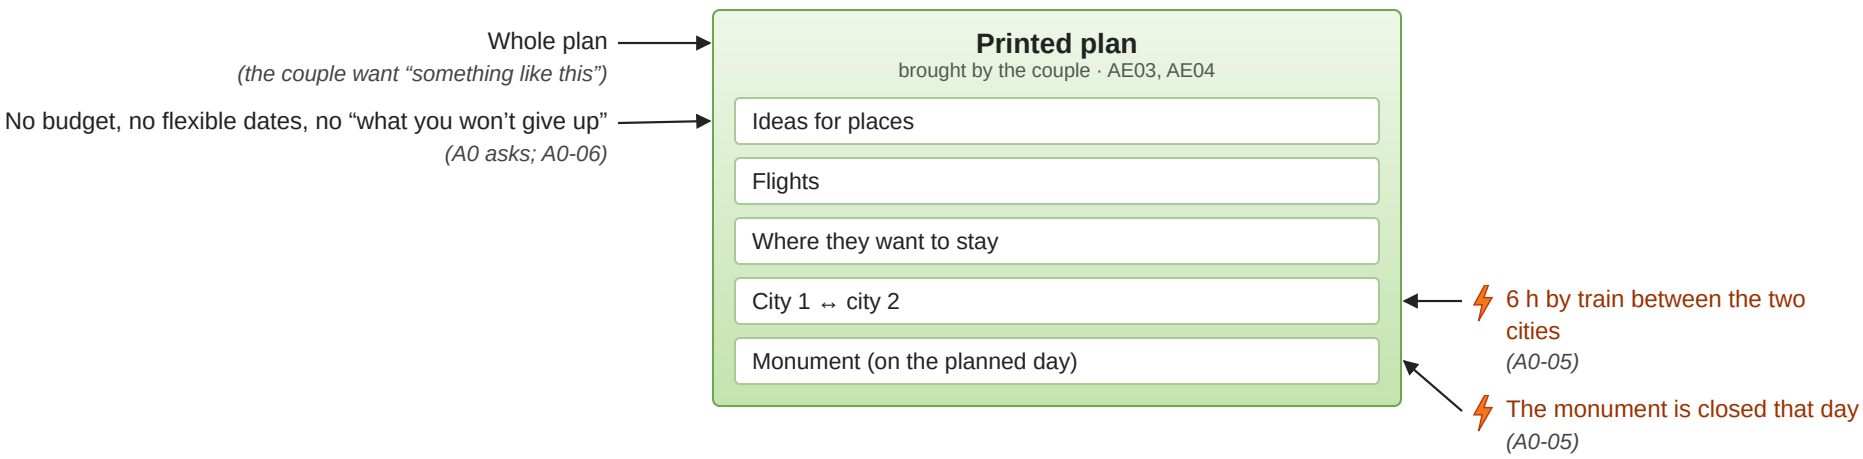
Artifact models: A0 (travel agent at the counter)

The things A0 used at the counter. Only what the A0 interview says.

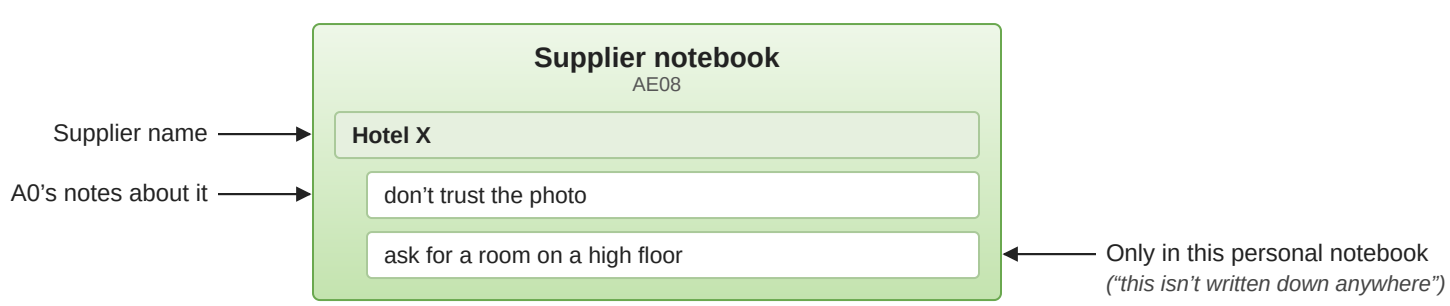
Breakdown: where the artifact gets in the way of the work *(italics) = how the part is used or why*

Codes show where each item comes from: UE / AE = interview notes; U0- / A0- = team notes after the interview; wrap-up = summary at the end of the interview.

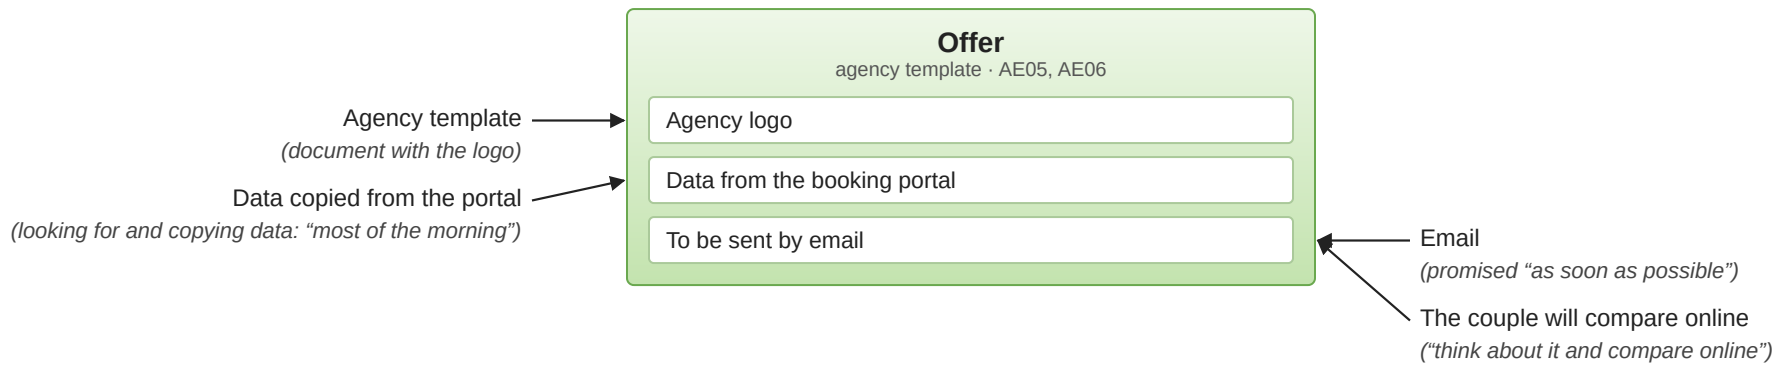
Presentation (layout, colours, fonts) is not shown: the interview recorded no photos, so each model shows only the parts that were seen or talked about.



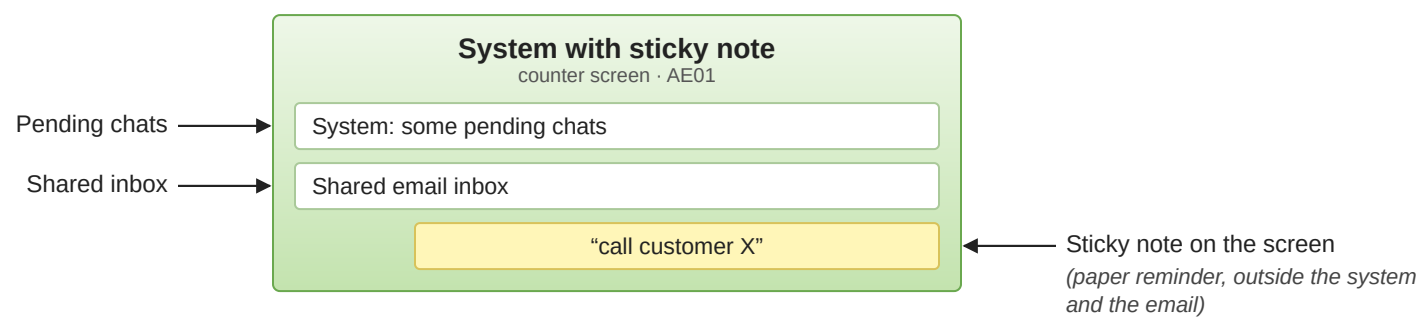
Artifact model: Printed plan. The couple bring their plan on paper: ideas for places, flights and where they want to stay. It does not answer A0’s questions about budget, flexible dates and what they will not give up, so A0 asks. While reading it, A0 finds two problems: the cities are 6 h apart by train and a monument is closed that day. (AE03, AE04; A0-04, A0-05, A0-06)



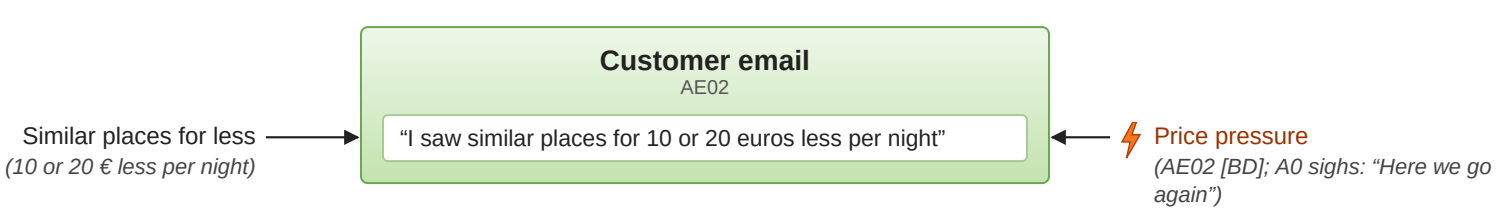
Artifact model: Supplier notebook. A0 keeps a personal notebook with what A0 knows about suppliers. A0 says this knowledge is not written down anywhere else. Knowing the suppliers is part of what A0 offers (wrap-up). (AE08; A0-10)



Artifact model: Offer. A0 copies the data from the booking portal into the agency template and promises to email it “as soon as possible”. A0 says looking for and copying data between systems takes “most of the morning”. The couple say they will think about it and compare online. (AE05, AE06, wrap-up; A0-07, A0-08)



Artifact model: System with sticky note. At 11:25 am A0 opens the system and the shared inbox. A paper note, “call customer X”, is stuck to the screen. A0 works in several places at once. (AE01; A0-01)



Artifact model: Customer email. A new request in the shared inbox. The customer says they saw similar places for less and uses this as pressure. The team note says customers compare prices online (A0-02). (AE02; A0-02)
